# SAFETY INFORMATION (UC, US MODEL)

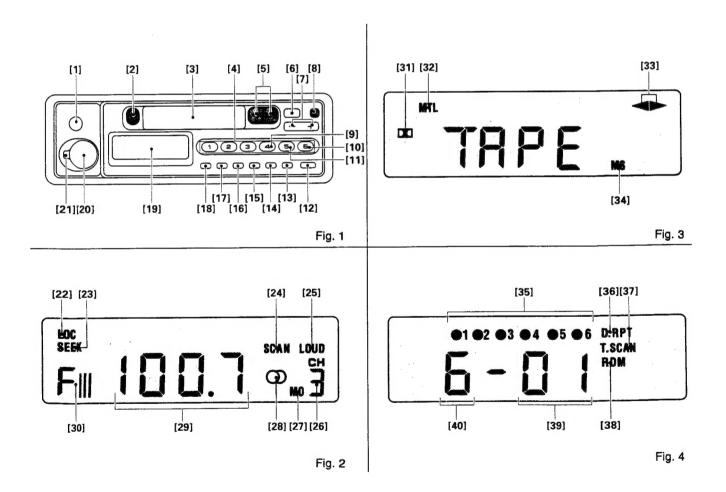

### CAUTION

This service manual is intended for qualified service technicians; it is not meant for the casual do-it-yourselfer. Qualified technicians have the necessary test equipment and tools, and have been trained to properly and safely repair complex products such as those covered by this manual.

Improperly performed repairs can adversely affect the safety and reliability of the product and may void the warranty. If you are not qualified to perform the repair of this product properly and safely, you should not risk trying to do so and refer the repair to a qualified service technician.

### **WARNING**

Lead in solder used in this product is listed by the California Health and Welfare agency as a known reproductive toxicant which may cause birth defects or other reproductive harm (California Health & Safety Code, Section 25249.5). When servicing or handling circuit boards and other components which contain lead in solder, avoid unprotected skin contact with the solder. Also, when soldering do not inhale any smoke or fumes produced.

# 1. USING THE REMOVABLE FRONT PANEL

The front panel of this unit can be removed to prevent theft.

### Parts Identification (Fig. 1)

[2] Eject

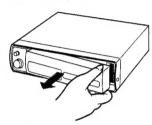

[5] Fast Forward, Rewind/Direction Change

[8] Detach button

## **Detaching the Front Panel**

1. Press button [8], and the right-hand side of the panel will eject.

To remove the front panel, pull its righthand side toward you.

 Take care not to put pressure on the display or drop the front panel.

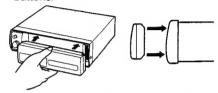

### **Optional Protective Case**

A separately sold protective case [AD-931] is available for the detached front panel. This case is highly recommended to protect the front panel from shocks and scratches.

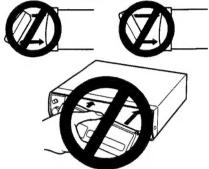

### Replacing the Front Panel

Push the front panel into the main body.

• When replacing the front panel, do not put pressure on the display or control buttons.

 Install the front panel holding it parallel to the main unit. Installing the panel tilted, as shown in the illustrations below, may cause the hook on the front panel to destroy the main unit's electrodes.

- Do not install the front panel while holding down buttons [2], [5] and [8] in Fig.1.
   Doing so may destroy the buttons and the main unit.
- Note that if the front panel is not attached correctly, pushing button [8] may not release the panel, and the other control buttons may not function.

### **Precautions**

 Do not touch the contacts on the front panel or on the unit body, since this may result in poor electrical contact. If dirt or other foreign substances get on the contacts, wipe them with a clean, dry cloth.

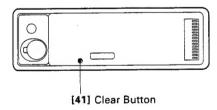

# Precautions When Handling the Front Panel

- Do not leave the front panel in any area exposed to high temperatures or direct sunlight.
- Do not drop the front panel or otherwise subject it to strong impact.
- Do not allow such volatile agents as benzine, thinner, or insecticides to come into contact with the surface of the front panel
- · Never try to disassemble the front panel.

# 2. USING THE CLEAR BUTTON

 The clear button can be located on the unit after you have removed the front panel. Refer to the previous page to find out how to remove the front panel.

Once all wiring is complete, press button [41] with a thin, pointed object. Though not a normal occurrence, the microprocessor which controls the operation of this unit can be affected by electrostatic noise. This generally is indicated by such symptoms as no power being supplied when you switch the unit on, failure of buttons and controls, or an abnormal display. Should this happen, press button [41] with a thin, pointed object to reset the microprocessor.

# 3. ADJUSTING VOLUME AND TONE

### Switching Power On

 GEH-M2000 does not include this tape deck function.

Insert the cassette tape through the Cassette Door [3], and the power will be automatically turned on to get the tape start being played back. To eject the tape, press the button [2].

Radio, Multi-play CD player

The unit incorporates priority cassette tape play. The unit will not switch to radio or multi-play CD player while a tape is inserted. Press button [2] to eject the tape.

• GEH-M2000 does not include tape deck

function. Therefore, procedures mentioned above will not be necessary. Press button [12] to switch the radio on.

Press button [12] a second time to switch it off. When combind with the separately available multi-play CD player (CDX-M30, etc.), the unit will switch in the following or-

Multi-play CD player — Radio — OFF

Inserting a tape while listening to either the multi-play CD player or radio will switch the unit to tape play.

### Listening to the Radio

### · Electronic Tuner

Frequency allocation differs depending upon the area. This unit has been designed in accordance with the frequency allocations for North America. Use in other areas will result in improper reception.

### **Adjusting Audio**

### Adjusting Volume

Turn the control [20] to the right to raise the volume. Turn the control to the left to lower the volume.

### Adjusting the Fader

Turn the control [21] upward to fade sound in the rear speakers. Turn the control downwards to fade sound in the front speakers.

 With a 2 speaker system, set the control in a central position.

### **Adjusting Bass**

Turn the control [1] to the right to increase bass. Turn the control to the left to decrease bass.

### **Adjusting Treble**

Pull the control [1] towards you until it clicks. Turn the control to the right while it is in this position to increase treble. Turn it to the left to decrease treble. After adjusting the control, push it back to its original posi-

### Adjusting Balance

Pull the control [20] towards you until it clicks. Turn the control to the right while it is in this position to fade sound in the left speaker. Turn it to the left to fade sound in the right speaker. After adjusting the control, push it back to its original position.

Using the Loudness Function

Press button [18] and the "LOUD" indicator will appear on the display. This "loudness" function enhances both the high and low ranges of sound to give even more power to output even at low volumes.

### KEH-M5500, KEH-M4500

The unit incorporates priority cassette tape play. The unit will not switch to radio play while a tape is inserted, so be sure to eject the tape when you wish to listen to the radio.

### 1. Press button [12] to switch the radio power on.

Press button [12] to switch the tuner on and off. Oprerations will be different when the unit is combined with a seperately available multi-play CD player (CDX-M30, etc.). For details on "Switching Power ON" refer to the relevent clause, on page 4.

2. Press button [6] to select a band.

### 3. Use seek tuning to tune in a frequency.

Confirm that the SEEK indicator [23] is shown on the display (if not, press the (+) and (-) sides of button [7] at the same time). Press the (+) side of button [7] to automatically tune in the next higher receivable frequency, and the (-) side for a lower frequency.

### 4. Adjust volume and tone (see page 4). 5. Assign the tuned frequency to one of the

buttons in Bank [4] (preset memory). Press and hold down one of the button in Bank [4] for at least two seconds. The frequency is assigned to the selected button when the preset number [26] stops flashing on the display. Up to 18 FM stations (6 each for FM1, FM2 and FM3), and six AM stations can be assigned to the preset memory buttons in Bank [4].

### 6. Once a frequency is assigned to a button in Bank [4], you just need to press that button to tune it in.

This also causes the number of the button pressed to appear at position [26] on the display.

### **BSM (Best Stations Memory)**

This function automatically locates stronger stations and automatically assigns their fre quencies to the buttons in Bank [4], from strongest to weakest. It comes in handy when trying to find local stations while driving.

1. Press button [6] and select a band.

2. Holding down button [13] for about two seconds will start BSM search. At this time, "BSM" will flash on the display.

3. The frequency display will return once BSM search is complete, and frequencies are assigned to buttons 1 through 6 in Bank [4].

At the end of the BSM search, the displayed frequency is that assigned to button 1 of Bank [4].

If there are fewer than six strong stations in the area, some of the buttons in Bank [4] will not be assigned frequencies, so they will retain any frequencies assigned to them previously.

BSM search may take as long as 30 seconds in areas where there are few strong

You can cancel BSM search by pressing button [13] again.

### **Preset Scan Tuning**

This function lets you automatically monitor the stations assigned to the preset buttons

1. Press the button [16], and "SCAN" [24] will light up and the preset number [26] flash.

Each station assigned to the buttons in Bank [4] will be automatically tuned in for about eight seconds.

When you hear a station that you like, press button [16] again to cancel preset scan tuning and remain at that station.

### **Adjusting Seek Sensitivity**

The seek tuning function of this tuner lets you select between a local setting for reception of strong stations only, and a DX (distant) setting for reception of weaker stations. The local setting also has four seek tuning sensitivity levels for FM and two levels for AM to match local conditions.

### **Changing the Local Seek Sensitivity**

1. Use button [6] to select a band.

- Hold down the button [15] for more than two seconds, and the display will show you the current local seek sensitivity for about five seconds.
- 3. While the local seek sensitivity remains on the display, press the (+) side of button [7] to increase the sensitivity level, and the (-) side to decrease the level as shown below.

FM: L-1 = L-2 = L-3 = L-4

AM: L-1 = L-2

The L-4 setting allows reception of only the strongest stations, while lower settings let you receive progressively weaker stations.

 The display of local seek sensitivity returns to the frequency when about 5 seconds have elapsed after the change of sensitivity.

### Switching between Local and DX

Press button [15] to switch between Local and DX (distant) seek tuning.
When "LOC" [22] is shown on the display, seek tuning is performed with the local seek sensitivity. Otherwise, seek tuning is performed with the DX seek sensitivity.

### Manual Tuning

Use manual tuning when stations are too weak to be picked up by seek tuning.

1.Press both (+) and (-) sides of button [7] at the same time to clear "SEEK" [23].

2.Each press of the (+) side of button [7] in-

2.Each press of the (+) side of button [7] increases the frequency in 0.2 MHz steps in the FM band, 10 kHz in the AM band. Pressing the (-) side of button [7] decreases the frequency. Holding down either side of button [7] changes the frequency at high speed.

# Switching between FM Stereo and Mono

Generally, it is best to allow the "Super Tuner" function to automatically set the optimum listening conditions. When stereo broadcasting is received, "O" [28] will appear on the display. When there is a large amount of noise, you can press button [17] for clearer mono reception ("MO" [27] will appear on the display).

## 5. USING THE TAPE DECK

GEH-M2000 does not include this tape deck function.

### Parts Identification

### About cassette tapes

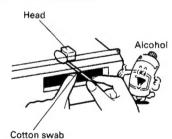

- Do not use tapes longer than C-90-type (90 min.) cassettes. Longer tapes can interfere with tape transport.
- Storing cassettes in areas directly exposed to sunlight or high temperatures can distort them and subsequently interfere with tape transport.

 Store unused tapes in a tape case where there is no danger of them becoming loose or being esposed to dust.

### Cleaning the head

If the playback head becomes dirty, sound quality will suffer. Periodically (once or twice a month) clean the head with a cotton swab soaked with alcohol.

### Listening to a tape

 Insert the cassette tape into the slot [3], and power will be turned on and the tape begin being played back.

At this time, the tape running direction indicator [33] will light up.

- 2. Adjust volume and tone (see page 4).
- 3.To eject the cassette tape, press the button [2].
- Be sure to eject the tape when the front panel is removed, or the vehicle's ignition is turned OFF. Leaving the tape in the unit can deform the pinch roller causing wow and flutter during tape playback.

- A loose or warped label on a cassette tape may interfere with the eject mechanism of the unit or cause the cassette to become jammed in the unit. Avoid using such tapes or remove such labels from the cassette before attempting use.
- Do not try to eject the cassette immediately after insertion, as it will cause malfunction. Wait a few seconds.

### **Changing Program**

Push the fast forward and rewind buttons [5] together to switch from one side of the tape to the other (from Side A to Side B or vice versa).

### **Using Fast Forward and Rewind**

Since the transport can be in either direction, both the left and right high-speed tape transport buttons [5] can be regard as fast forward/rewind buttons. For fast forward, press the high-speed tape transport button [5] that corresponds to the direction that is shown by the direction indicator [33]. When the end of the tape is reached, playback will automatically begin from the opposite side of the tape (Auto-reverse). For rewind, press the button [5] that is opposite that of the direction shown by the direction indicator [33]. When the end of the tape is reached, playback will automatically begin from the beginning of the same side of the tape (Auto-replay).

When you release fast forwad/rewind, lightly press button [5] located on the opposite side of the one you pressed to fast foward

or rewind.

• "◄►" [33] will flash when the tape is fast forwarding or rewinding.

# KEH-M5500

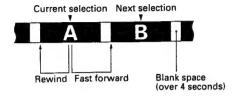

# Using Music Search (KEH-M5500)

Returning to the beginning of selection A
Press the button [9] ("MS" [34] appears)
and then the high-speed tape transport button [5] for the direction opposite that is
shown by the direction indicator [33].
Playback will automatically start from the
beginning of selection A.

Moving from selection A to selection B
Press the button [9] ("MS" [34] appears)
and then the high-speed tape transport button [5] that corresponds to the direction
shown by the direction indicator [33].
Playback will automatically start from the
beginning of selection B.

To enable regular fast forward/rewind operations, press the button [9] again ("MS" [34] turns off) to turn the function OFF. The following errors will cause the music search function to operate improperly, even though the unit is not malfunctioning.

- Unrecorded "blank" portions between selections less than 4 seconds the blank portion cannot be detected by the unit.
- Pauses in recorded conversations longer than 4 seconds — the unit reads these as blanks between selections.
- Portions recorded at very low volume for more than 4 seconds — the unit reads these as blanks between selections.

### Dolby B NR (KEH-M5500)

To hear a tape recorded using a Dolby NR system, press the button [11]. ("DD" [31] appears.)

### Tape Selector (KEH-M5500)

When using metal tapes and chrome tapes, press button [10]. ("MTL" [32] appears.)

Dolby noise reduction manufactured under license from Dolby Laboratories Licensing Corporation. "DOLBY" and the double-D symbol DC

"DOLBY" and the double-D symbol La are trademarks of Dolby Laboratories Licensing Corporation.

# 6. USING THE CLOCK DISPLAY

### Parts Identification (Fig. 1)

[4] Minute Adjustment/Hour Adjustment [14] Clock [19] Display

### Display the Time

The clock is displayed while button [14] is depressed. Press button [14] again to turn off the clock display.

- off the clock display.
  The clock display can be used only when the main unit is in operation.
- When the clock display is ON, pressing other buttons will release the clock display. The display will be restored approximately 25 seconds after the button operation has been completed.

# Adjusting the Time Adjusting Hours

While holding down button [14], Press button 1 from the buttons shown on [4], to adjust the hour setting of the clock. Each press button 1, advances the hour setting by one hour, and holding it down advances the setting at high speed.

## **Adjusting the Minutes**

While holding down button [14], Press button 2 from the buttons shown on [4], to adjust the minute setting of the clock. Each press button 2, advances the minute setting by one minute, and holding it down advances the setting at high speed.

### 7. PLAYING COMPACT DISCS

### Precautions When Using the Multi-Play CD Control

- This model can be used as controller when an optionally available multi-play CD player (e.g., CDX-M30) is included in the system. Programmed play does not operate when used with the multi-CD player CDX-M70 or CDX-M100.
- · See pages 7 through 8 for details on operation procedures.
- The Owner's Manual for the multi-play CD player does not contain an explanation of the CD controls for this unit. Read this Owner's Manual for details on proper operation and keep it handy for later ref-
- Immediately after the multi-play CD player is connected to the system, it may not operate properly. In this case, press the clear button of the main unit and the clear button of the multi-play CD player, and attempt operation again.

The Magazine Type Multi-Play CD players with @@@@ mark and the Mazazines with the same mark are compatible for 5-inch (12 cm) discs.

### Listening to the Compact Disc

### Parts Identification

- [4] Disc Number search
- [6] Program Clear
- [7] Track Number Search/Fast Forward, Reverse
- [12] Source Selector
- [15] ITP (Instant Track Program)
- [16] Highlight Scan

- [19] Display

# (Fig. 4)

- [35] Disc
- [36] Music Repeat/Disc Repeat
- [37] Highlight Scan
- [38] Random Play
- [39] Track Number
- [40] Disc Number

### KEH-M5500, KEH-M4500

The unit incorporates priority cassette tape play. The unit will not switch to multi-play CD player while a tape is inserted, so be sure to eject the tape when you wish to listen to CD play.

1. Press button [12] to change the display to the Multi-Play CD player mode and to be-

gin disc play. Each press of button [12] changes the mode as follows: Multi-Play CD player — tuner —

2. Use the Disc Number Search function to

select a disc.
Select the desired disc by pressing one of the buttons in Bank [4]. The number of the disc selected appears at position [40] on the display.

- · Display [35] indicates whether the magazine is loaded or empty.
- If the number at position [40] on the display does not change when you press a button in Bank [4], it means that there is no disc loaded in that tray.

### 3. Use Track Number search to select a track.

Confirm that Track Number is shown at Position (39) on the display. If not, press the (+) and (-) sides of button [7] at the same time. Press the (+) side of button [7] to increase the number at Position [39], or the (-) side to decrease the number. Holding either side of button [7] down changes the track number at high speed.

4. Adjust volume and tone (see page 4). 5. To stop disc play, press button [12]. At another press, the normal play resumes from about where it stopped.

If you stopped operating a Multi-Play CD Player CDX-M100 in the middle of music and then restarted, the player resumes playing from the very beginning of the se-

### Note:

After you press a button in Bank [4], it may take some time before play begins due to the time necessary to load and set the disc in the mechanism.

lection with which you stopped.

· This indicator HHHH flashes on the display and playback is automatically cut when the temperature around the multiplay CD player becomes too high. This protects the laser mechanism from serious damage. Listen to the radio unit the temperature returns to normal. (This functions only when your unit is used with a Multi-Play CD player CDX-M 100.)

Using Highlight Scan

it otherwise.

Highlight Scan is designed to enable you to conveniently scan all pieces of music contained in the disc by playing 10 seconds each at your designated point of time after the start of the music. The starting time of play is set at one minute in factory. Therefore, the Highlight Scan begins one minute after the start unless you designate

When you do not want to change the factory-set time:

- · When used in conjunction with the old type Multi-Play CD Players [CDX-M70] or [CDX-M100], the place where playback starts in Highlight Scan is fixed as the start of each track. Also, it is not possible to adjust this time setting.

  1. Press button [16] ("T.SCAN" [37] ap-
- pears).
- 2. The contained pieces of music will be played in sequence for 10 seconds each one minute after the beginning.
- 3. Press button [16] again when your selected piece comes, and it will continue to play. At this point, the Highlight Scan dis-continues to operate.

· The previous function automatically resumes when a piece of music with which Highlight Scan began returns.

### Changing the starting time of Highlight Scan

When you want to set the starting time of the Highlight Scan to 30 seconds:

- 1. Press button [7], (+) and (-) sides simultaneously, and time numerals will be displayed.
- 2. Keep pressing either (+) or (-) side of button [7] until the numerals reaches 30.
- 3. Hold down button [16] for two or more seconds, and "T.SCAN" [37] appears and the Highlight Scan will begin. 30 seconds after the start of the next piece of music.
- The starting time of Highlight Scan can be designated at ten or tens of seconds only. A tenth or tenths of seconds can be disregarded.
- · If a piece of music ends before your designated point of time at which Highlight Scan starts, the scanning is performed for its beginning 10 seconds.
- If a piece of music lasts less than 10 seconds, so does the Highlight Scan.
- You may wish to change the starting time longer without suspending the function. You may do so, however, only to a relatively long-playing piece of music because, as a matter of course, the time cannot be set so as to come after the end of the music.

### Using Disc Repeat, Music Repeat and Random Play

Each Press of button [17] causes the mode

to change as follows: Music Repeat ("RPT" [36] appears) — Random Play ("RDM" [38] appears) -Normal

If button [17] is pressed for 2 or more seconds, the mode changes to Disc Repeat ("D.RPT" [36] appears).

When Disc Repeat or Music Repeat are not operational, the compact discs contained in the magazine will play sequentially from beginning to end, and then start from disc 1 again.

### Music Repeat

- 1.To repeat the music you are listening to, select the repeat mode ("RPT" [36] ap-
- 2.To cancel music repeat, press button [17] to turn off "RPT" [36].

### Random Play

- 1.To play music randomly, select the random play mode ("RDM" [38] appears). Once the current track has been played, the microprocessor will randomly select the next and subsequent tracks.
- 2.To cancel random play, press button [17] to turn off "RDM" [38].
- Since selections are played in random order, the same selection may be played twice in succession.
- When a Multi-Play CD Player CDX-M100 is used, random selection is made from a disc being played.

### Disc Repeat

The Disc Repeat function causes the same disc to play repeatedly.

- 1. Press button [17] for 2 seconds or more while the desired disc is being played. The mode will change to Disc Repeat mode ("D.RPT" [36] appears).
- 2. To cancel Disc Repeat, again, press button [17] for 2 seconds or more and turn off "D.RPT" at [36].

### **Using Fast Forward and Reverse**

- 1. Press simultaneously both (+) and (-) sides of the button [7].
- At this time the display will show the amount of elapsed disc play time.
- 2. Press the (+) side of button [7] for fast forward, and the (-) side for reverse.
- Sound is output during fast forward and reverse operations.
- The display counts down the number of seconds between tracks if the spacing is rather large (-'00"-'01").

### **Using Program Play**

This function lets you program the play seguence of all of the tracks contained on the compact discs loaded in the magazine.

- · The ITP function will not operate when connected to either the CDX-M70 or CDX-M100.
- Up to 32 selections can be programmed for a single magazine.
- Up to 16 different magazines (max. 32 selections per magazine) can be programmed individually. If you program more than 16 magazines, old programs are automatically replaced by new ones.
- Automatic Magazine Program Selection (AMPS) retrieves the right program from the memory automatically, as soon as a preprogrammed magazine is loaded. Preprogrammed magazines are identified using the CD in the tray 1 of the magazine. Therefore be sure that tray 1 contains a disc.

### **Programming**

- 1. While a disc is playing, select the desired
- disc and track you want to program. 2.Press button [15] to memorize the track being played. ("P-01" is indicated during the memory
- 3. Procedures 1 and 2 above can be repeated until a maximum of 32 steps are pro-
- rammed. If the 33rd step is selected, the "FULL" display will appear, indicating that no more selections can be programmed.
- When there are already a number of selections in the memory, the new selection will be added to the last step.

### Playing Back the Program

- 1. Hold down button [15] for 2 seconds to begin play in the programmed sequence, while a disc is playing. ("PP01" is indicated during the step where the program is played.)
- 2. Press button [15] again to cancel program play.
- Pressing the (+) or (-) side of button [7] during programmed play makes it possible to search for a specific step number from among the programmed selections.
- Program play returns to the first step in the programmed sequence when it reaches the end of the program.
- When playing a magazine that has no program recorded, "PP00" will be displayed for approximately 3 seconds.

### Erasing the Program

It is possible to erase one or all selections of the program in the magazine being played.

### To erase a single selection:

- 1. Press the (+) or (-) side of button [7] during programmed play, and search for the specific step you wish to erase.

  2. Press button [6] for at least 2 seconds and
- the selection being played will be erased. After the particular track has been erased,
- the tracks in the next position move from down up one notch in the order from the previous position.

To erase the entire program: While a disc is playing, hold down button [6] for at least 2 seconds. All the programs in the magazine being played will be

erased. ("P-CL" is indicated on the display.)

### **Error Mode**

Should an abnormality occur - for example, Multi-Play CD Player cannot be operated, or the music stops during CD playback the main unit will indicate an error mode. (Example: "E-11")

While it the unit is in error mode, a number will be displayed indicating the cause of the error, so please check the items listed below. If you cannot fix the problem after checking the cause of the error, please contact your dealer or your nearest Pioneer service center.

When using the Multi-Play CD Player, CDX-M100, CDX-M70, CDX-M50 and CDX-M40, an error will be displayed only in the form of "E-00", without the number which indicated the cause of the error. When this display appears, please check items 11, 12, 14, or 30 listed below.

Display	Cause	Treatment
44 40	Dirt or a scratch on the disc stops the laser beam from being able to focus.	Wipe the dirt off the disc. Exchange the disc if it is scratched.
11, 12	The disc has been inserted upside down.	Confirm that the disc has been inserted right side up.
	The disc has been inserted upside down.	Confirm that the disc has been inserted right side up.
14	An unrecorded compact disc (CD-R), can be recorded on once is being used.	When you use a CD-R, load one that has been recorded on.
30	Dirt or a scratch on the disc hinders the track number search function.	Wipe the dirt off the disc. Exchange the disc if it is scratched.
80	An empty magazine is loaded in the multi-play CD player.	Insert a disc in the magazine.
10, 12, 50, 60, 70, A0	Electrical or mechanical system fault.	Turn the car ignition switch OFF, then ON again, or change to other sources except CD playback, and then to CD playback again. If the error indication does not disappear, contact your dealer or your nearest Pioneer service station.

 When error numbers not mentioned above are indicated, refer to the owner's manual accompanying the multi-play CD player.

## CONNECTING THE UNITS

- Before making final connections, make temporary connections then operate the unit to check for any connecting cord problems.
- · Refer to the owner's manual for details on connecting the various cords of the power amp and other units, then make connections correctly.
- Be sure to connect the memory power supply lead (orange) to a terminal that is always supplied with power regardless of the vehicle's ignition switch position. If this connection is made incorrectly or is forgotten, the unit will not work at all.
- Don't pass the orange lead through a hole into the engine compartment to connect to the battery. This will damage the lead insulation and cause a very dangerous short.
- Since a unique BPTL circuit is employed, never wire so the speaker leads are directly grounded or the left and right speaker - leads are common.
- Speakers connected to this unit must be high-power types possessing minimum rating of 30W and impedance of 4 to 8 ohms. Connecting speakers with output and/or impedance values other than those noted here can damage the speak-

· When the unit is mounted in a vehicle whose ignition switch does not have the ACC (accessory) position as shown in Fig. 6, be sure to connect the red lead of the unit to the terminal controlled by the ignition switch ON/OFF position. If you do not, the vehicle battery may go flat when you leave your vehicle for several hours.

### Note

Specifications and the design are subject to possible modification without notice due to improvements.

# 10. DISASSEMBLY

- Removing the case
- 1. Insert and turn a pair of tweezers at locations indicated by arrows to remove the case.
- Removing the grille assy
- 1. Press the detach button, and then pull grille assy.

- 1. Remove the four screws.
- 2. Disconnect the connector.
- 3. Remove the cassette mechanism assy.

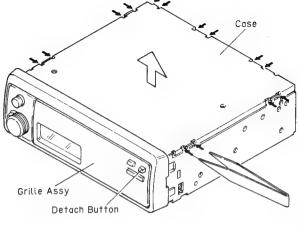

Fig. 8

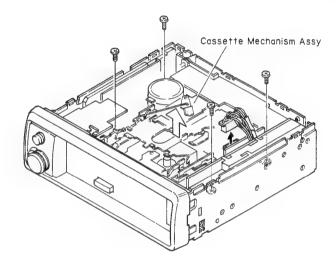

Fig. 9

- Removing the panel assy
- 1. Disconnect a connector.
- 2. Remove the three knobs.
- Press tabs at four locations indicated by arrows.
- 4. Remove the panel assy.

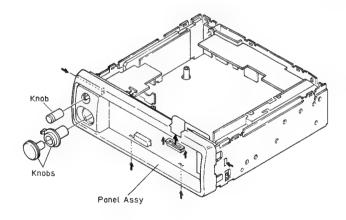

Fig. 10

# KEH-M5500

- Removing the chassis unit
- 1. Remove the eight screws.
- 2. Unbend the claw indicated by arrow until straight.
- 3. Remove the chassis unit.

# 12. ADJUSTMENT

### Test Mode

Test mode is mainly used in adjustment of CD multi-players.

- Switching to test mode
- 1.Turn off the Back-up and ACC off.
- 2.Discharge VDD.
- 3. Turn the Back-up and ACC on while pressing the 4&6 keys together.
- Canceling test mode While pressing the CD multi-player clear button, switch this unit back-up and ACC OFF.
- Key functions during test mode
  The CD multi-player, deck, and tuner are selected by the SOURCE button.

### a)CD multi-player

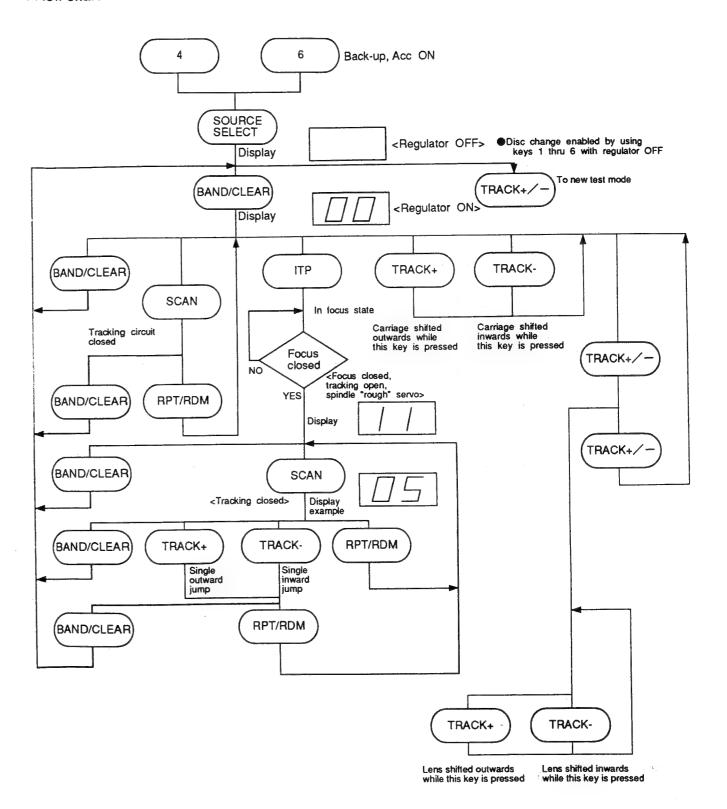

key	Function
BAND/CLEAR	Regulator ON / OFF
TRACK +	FWD kick
TRACK -	REV kick
SCAN	Tracking close
RPT/RDM	Tracking open
ITP	Focus close
TRACK +/-	Carriage/tracking switching

### b)Deck and tuner

15

No corresponding function. Normal operation executed.

The KEH-M580/US,KEH-M4500/UC,KEH-M4500/X1H and KEH-M5550/ES Parts Lists enumerate the parts which differ from those enumerated in the KEH-M5500/UC Parts List only.

The parts other than those enumerated in the former are indentical with those in the latter, to which you are requested to refer, accordingly.

The KEH-M5500/UC Parts List is given on page 65.

# 22. CIRCUIT DESCRIPTION

### • Indicating an Error Number

If the CD should fail to operate in multi mode, or if an error has taken place during the operation and resulted in an error, the player will enter into the error mode. And the cause of such error is numerically indicated. This is aimed at assisting an analysis or a repair.

(1) Basic Means of Display

 With ERROR indicated in "MODE" on P-BUS Display date, an error code is transmitte by the use of MIN and SEC.

Identical date are transmitted with MIN and SEC.

Examples of Head Unit Display

E-XX (4 digits)

### (2) Error Codes

Error Code	Classification	Mode	Description	Detail/Cause
10	ELECTRIC	SET UP	Carriage home failure	Unmovable to and from the inner circumference → Home switch failed and/or carriage improper moved
11	†	†	Focus failure	Focussing failed  → Disk scarred or stained on the back or vibrating hard
12	t	1	SET UP failure	Spindle failed to lock or subcode extraordinary  → Spindle defective, disk other than audio and ROM
30	1	SEARCH	Search time out	Target address failed to reach  → Carriade/tracking improperly and/or disk scarred
A0	SYSTEM	_	Power failure	Power overvoltage or short circuit detected  Switching transistor defective and/or power abnormal
50			An error upon ejection	MAG SW release time has timeout.
60			An error while putting in and out the tray	Tray in/out time has timeout. Tray is caught when put in.
70			An error upon elevation	Elevation time has timeout.
80			An error with an empty magazine inserted	No disk is available.

<sup>\*</sup>If TOC has failed to be read in, the operation will continue anyway.

Error Code A0 is peculiar to the this unit and inapplicable to another future CD player.

# New Test Mode (aging operation and setup analysis)

The CD multiple plays in the normal mode. After being set up, it will display FOK (focus), LOCK (spindle), subcode, sound skip, protection against a mechanical error or the like, occurrence of an error, cause and time of an expiry, and disc number.

During the setup, the CD software operation status (internal RAM and C-point) is displayed.

The software on the head unit side does not involve any special problem but runs normally.

Since it is nesessary to cope with the error number display function.

- (1) How to Put in the NEW TEST Mode See the test mode flow chart page 16.
- (2) Relations of keys between TEST and NEW TEST Modes.

P-BUS Commands	Keys	Test Mode		New Test Mode	New Test Mode
		Regulator OFF	Regulator ON	Play in progress	Error Protection Talking place
ВО	BAND/REL	Regulator ON	Regulator OFF	BAND/REL	Time of occurrence Cause of error
B1	TRACK +	_	FWD-KICK	TRACK +	_
B2	TRACK -	_	REV-KICK	TRACK -	
B3	SCAN	_	TRACKING CLOSE	SCAN	_
84	RPT/RDM		TRACKING OPEN	RPT/RDM	_
B5	ITP	otherm .	FOCUS CLOSE	ITP	
B6	_	and the second	FOCUS OPEN	_	-
B7	_	_	Jump-OFF	_	_
В8	TRACK+/-	To new Test Mode	Jump-Mode selected	TRACK+/-	Occurrence TNo Time of occurrence Selected

Operations, such as EJECT, CD ON/OFF, etc. are to be performed normally

# (3) Error Cause (Error Number) Code

Error Code	Classification	Mode	Description	Cause/Detail	
40	ELECTRIC	PLAY	FOK = L 100 ms	Put out of focus	Scar.
41	1	†	LOCK - L 100 ms	Spindle unlocked	Stain, Vibration,
42	t	Ť	Subcode unacceptable 500 ms	Subcode failes to read	Servo defect,
43	t	†	Sound skipped	Last address memory operated	etc

<sup>\*</sup>The error code is identical with those in the normal mode.

### (4) Indicating an Operation Status During Setup

Status No.	Description	Protection operation	
01	Carriage home mode started	None	
02	Carriage moving on the internal circumference	10-second time out	
03	Carriage moving on the external circumference	10-second time out	
11	Setup started	None	
12	Spindle turn/Focus search started	None	
13	Waiting for focus closing	Failure to focus closing	
14	Spindle kicked and focus checked	Out of focus	
15	Tracking closed and focus checked	Out of focus	
17	Carriage closed and focus checked	Out of focus	
18	Lock subcode Waiting	Failure to lock, Subcode failed to read out of focus	
19	End	None

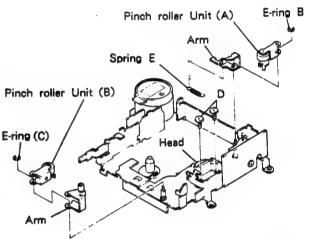

Fig. 7

- 1. Remove spring A. (Fig.4)
- 2. Extend claws (2 points). (Fig.5)
- 3. Remove bar Spring. (Fig.5)
- Disengage projection by moving in a direction of arrow mark. (Fig.5)
- 5. The cassette frame is removed. (Fig.6)
- 6. Remove springs C and D. (Fig.6)
- 7. Remove E-ring A. (Fig.6)
- 8. Remove FF/REW levers. (Fig.6)

- 9. Move head base unit forward. (Fig.6)
- 10. Remove spring E. (Fig.7)
- 11. Remove E-ring B. The pinch roller unit (A) can be removed. (Fig.7)
- 12. Remove E-ring C. The pinch roller unit (B) can be removed. (Fig.7)
- 13. Remove two screws D. The head can be removed. (Fig.7)

# 2. ADJUSTMENT

# 2.1 CHECK POINTS OF CASSETTE MECHANISM

	■ Tape speed deviation:  3,000 <sup>+90</sup> <sub>-30</sub> Hz	■ Wow and flutter: Less than 0.2% (WRMS)
Confirm the following items when replacing parts of the cassette mechanism.	(4.76cm/s +3 %)  Using an NCT-111, measure the speed at the start and end of winding and take the maximum value. If values indicated by the pointer vary considerably, adjust	Using an NCT-111, measure the wow and flutter at the start and end of winding and take the maximum value. If values indicated by the pointer vary considerably, adjust to 70% of the minimum and maximum values. Meas-
	to 70% of the minimun and maximum values. Measuring time shall be 5 - 6 seconds.	uring time shall be 5 - 6 seconds.
Fast forward and rewinding time:	Winding torque:	F.F. torque:
100 — 120 seconds	35 — 65 <b>g °</b> cm	70 — 120g · cm
Using a C-60, set to fast forward and rewind, and measure the time with a stop watch.	Using a cassette type torque meter (100 g·cm), measure the minimum value while in the play mode. Measuring time shall be 2.5 — 6 seconds.	Using a cassette type torque meter (120 g-cm), measure the value when the tape stops in the F.F. mode.
REW torque:	Back tension torque:	Cassette loading force:
70 — 120g · cm	2 — 6g · cm	Less than 0.7 kg
Using a cassette type torque meter (120 g-cm), measure the value when the tape stops in the REW mode.	After setting in the REW mode without loading a cassette tape for 5 minutes, measure the back tension torque in the play mode, using a cassette type torque meter.	Push the center of the cassette ar measure the force with a tension met (3 kg).

### 2.2 AZIMUTH ADJUSTMENT

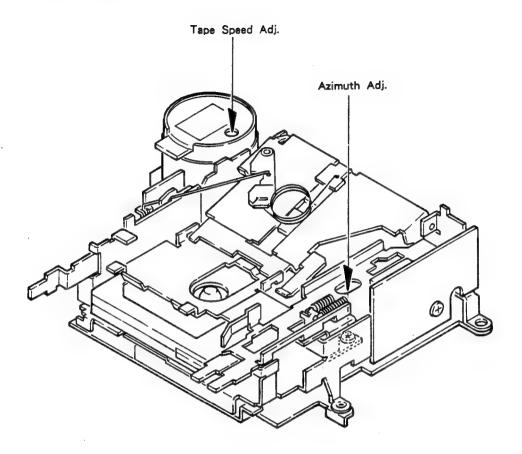

Fig. 8

# ● To Adjust (EXK1750)

- Play "A" side of NCT-110 (10kHz, 10dB). Adjust the screw for maximum output in forward and reverse directions.
- 2. Play "B" side in forward and reverse directions to confirm adjustment.

### 2.3 TAPE SPEED ADJUSTMENT

 Reproduce NCT-111 (3kHz, - 10dB). Adjust the semifixed resistor so that frequency counter shows 3010Hz (+80Hz, - 40Hz).

# 3. MECHANISM DESCRIPTION

### Loading operation

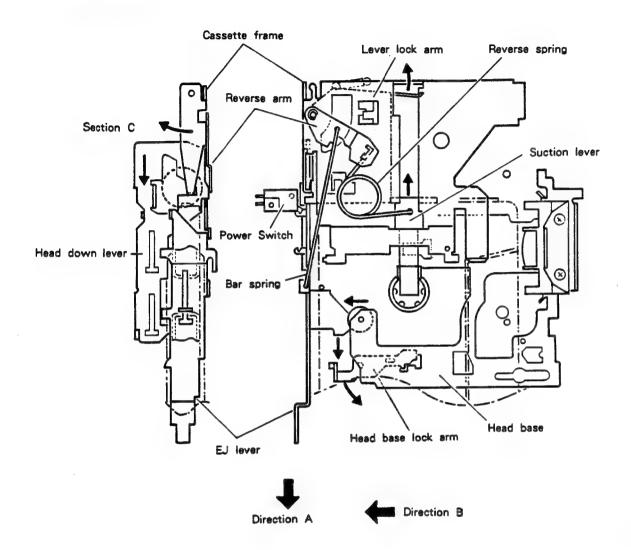

Fig. 9

- 1. A cassette tape, when inserted, pushes a suction lever.
  - The reverse spring rotates to move past the reverse point. Then, the cassette is drawn by a force of a reverse spring (suction operation).
- After suction, the lever lock arm is pressed to be unlocked.
- 3. The head down lever is unlocked and the lever moves in Direction A.

- 4. While moving, the EJ lever turns ON the power switch.
- The cassette frame engaged to the section C of the head down lever turns. (Cassette drop operation)
- At the stroke end, the head down lever turns the head base lock arm.
- A Stopper of the head base lock arm is released, and the head base moves forward (Direction B).

### ● MS Operation (EXK1720, EXK1750)

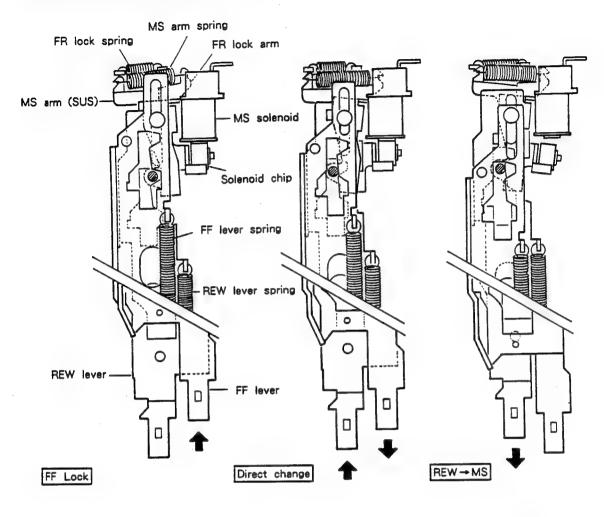

Fig. 10 Fig. 11 Fig. 12

- The MS solenoid is normally energized to attract the solenoid chip during play and F/R operation. The solenoid chip applies counterclockwise force to the MS arm, thereby putting the FR lock arm into rotation via the MS arm spring. The MS lock shaft of FR lock arm unit catches a taper in a different hole of the FF (or REW) lever to lock the FF (or REW) lever.
- In case of direct change, pressing the unlocked FF or REW lever causes the lever taper to turn the FR lock arm clockwise. This in turn presses the MS arm spring and FR lock spring to release the locked lever.
- 3. When the no recording section is caught and the power supply to the solenoid is cut off, the solenoid loses the attraction force and disables locking of the F/R lever. As a result, the F/R lever is unlocked. (This unlocking occurs because the force to retain the lever cannot be generated by the FR lock spring only.)

# Direction Changeover Operation

### (1) FWD play operation

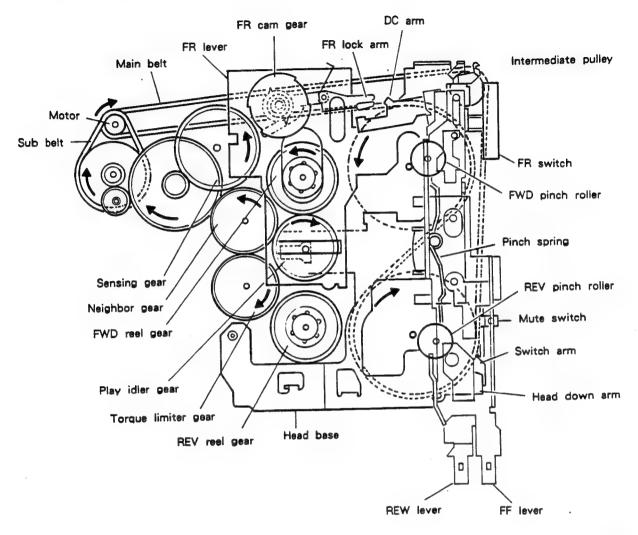

Fig. 13

When the FR lever is in the top position, the pinch spring is in the upper position to press the FWD pinch roller. The FR switch also moves upward and its reaction causes downward force on the FR lever. The spring attached to the FR lever applies upward force to the play idler gear from above to engage it with the neighbor gear and FWD reel gear.

The tape is driven in the FWD direction by a running motor and taken up by the REV reel gear via the torque limiter gear.

#### (2) Direction change operation

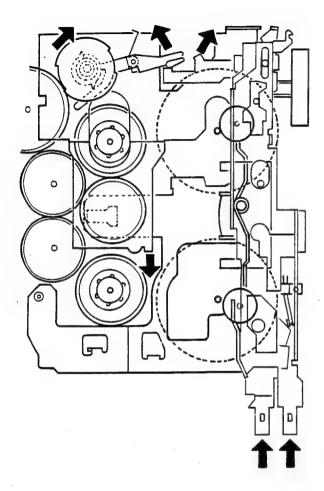

Fig. 14

#### (3) REV play operation

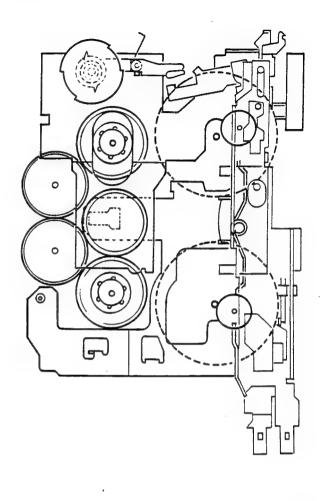

Fig. 15

The direction is changed by pressing FF and REW levers simultaneously. The DC arm turns along a cam groove of FF and REW levers to turn the FR lock arm. As the FR lever applies force from above downward, the FR cam gear turns and the notch meshes with the sensing gear.

As a result, the FR lever moves downward.

When FF and REW levers are kept pressed, the lock arm contacts the outside of the FR cam gear to prevent changeover between FWD and REV. Pressing FF and REW levers also cause the mute switch to be turned ON. In other words, muting is valid while FF and REW levers are pressed. (Fig.14)

Moving the NR lever up and down causes changeover among the pinch roller, FR switch, and play idler gear. With FF and REW levers having been returned, the FR lock arm returns to the normal lock position and locks the gear when the FR gear completes an one-half turn. The mute arm also returns to turn OFF the mute switch. The reverse play state is thus obtained. (The same applies to changeover from REV to FWD.)

### • FF/REW Operation

### (1) FWD play operation

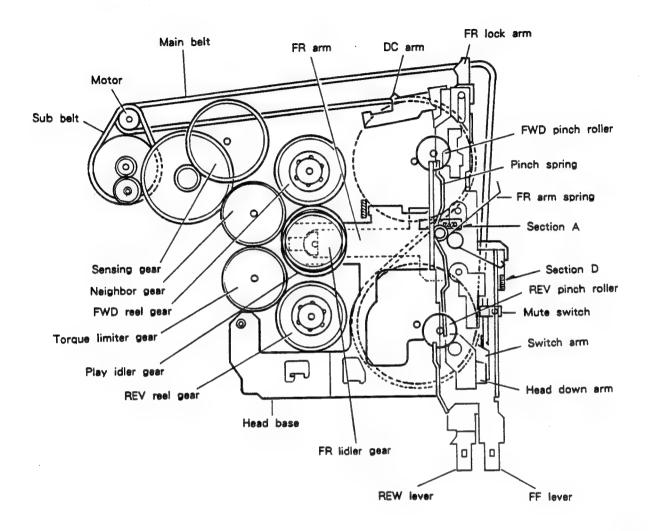

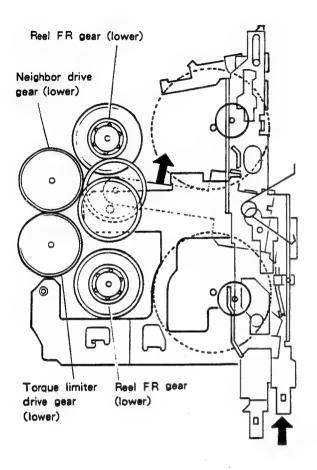

Fig. 16

In the FWD (REV) play state, the head base is fixed by a chassis stopper. The pinch spring presses the pinch roller into contact with a capstan to drive forward the tape. The REV reel gear takes up the tape via the torque limiter gear. In this case, the FR idler gear on the FR arm is centered by Section A of the head base and thus not rotating.

#### (2) FF Operation

#### (3) REW operation

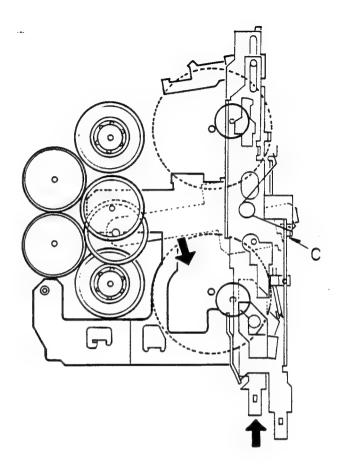

Fig. 17

Fig. 18

FF operation is obtained by pressing and locking the FF lever. As the FF lever is pressed, the switch arm turns to turn ON the mute switch. The head base is moved backward along the FF lever cam groove.

As the head base moves backward to release the pinch roller from the capstan, the play idler gear is simultaneously disengaged from the reel gear. As the head base moves backward, the FR arm centered by Section A is put into rotation by the FR arm spring to engage with the FWD side FR gear.

The FF lever is locked by the FR lock arm and performs the FF operation. (Fig.17)

Similar to the case of FF operation, pressing the REW lever causes the mute switch to be turned ON.

Simultaneously with release of the pinch roller from the capstan, the play idler gear is disengaged from the reel gear.

Section D of the REW lever presses a movable side of the FR arm spring, thereby engaging the FR gear to the FR gear on the REV side.

The REW lever is locked by the lock arm, performing the REW operation. This operation is cancelled when Section C is turned by the lever return spring. (Fig.18)

### Sensing Operation

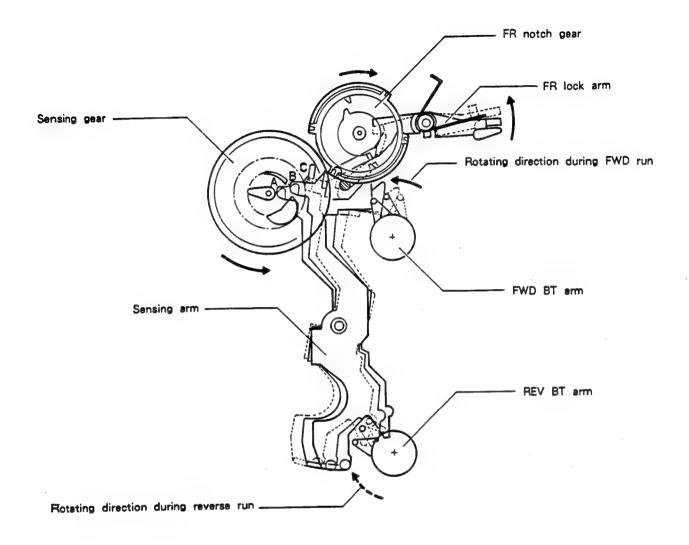

Fig. 19

- During tape run: The sensing arm keeps oscillation between A and B under a force of the FWD BT arm (or REV BT arm).
- 2. At end of tape: The force of the BT arm is lost. The sensing arm stops at Position B, then pushed out to Position C by a crescent carn of the sensing gear.
- 3. Change of run direction:

The FR lock arm turns counterclockwise along with movement of the sensing arm. The FR notch gear is unlocked and begins to turn.

## ATSC Opeeration

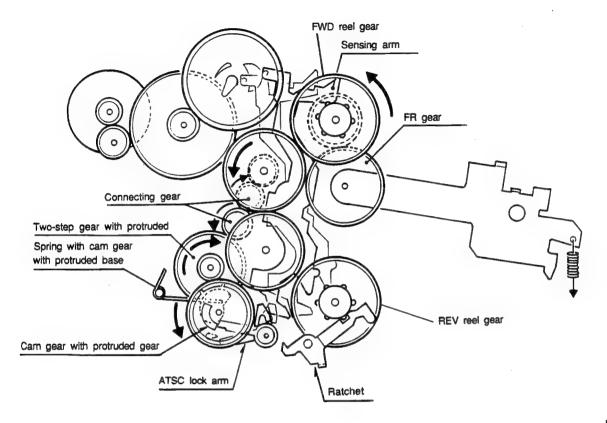

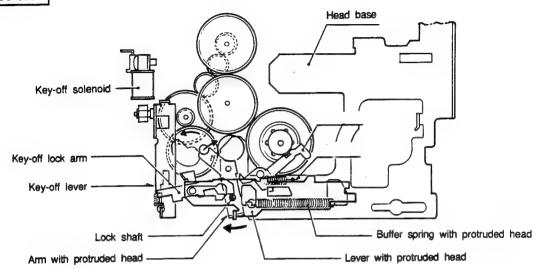

Fig. 18

- At the position for releasing the head table, the FR gear is meshed with the FWD reel gear. Because the ratchet in the REV reel gear stops rotating, the tape must be wound up until no slack exist.
- Because the rotation stops when no slack exists in the tape, sensing is performed. The sensing arm presses the ATSC lock arm, and the lock of the cam gear with protruded head gets out of position. Then, the cam gear is made to rotate.

## Key-off Operation

#### Release Condtion

## Play Condition

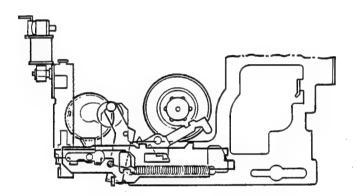

Fig. 19

## 1. Thrusting head:

The arm with protruded head is rotated by the rotation of the cam gear with protruded head, and the lever with protruded head is pushed out. Because the lever with the protruded head and head base are connected by the buffer spring with protruded head, the head base moves forward.

### 2. Lock for head base:

When the lever with protruded head moves forward, the lock shaft caulked by the lever with protruded head shifts. Thus, the key-off lock arm can rotate, and the key-off lever reaches the key-off solenoid

3. Key-off:

by force of a spring, and becomes attached. (Although escape power works on the key-off lock arm by force of the head return spring, the solenoid maintains it.)

The key-off lock arm is rotated by the power of the head return spring when the key-off solenoid is switched off, and the lever with protruded head and head base move back together.

### EJECT Operation

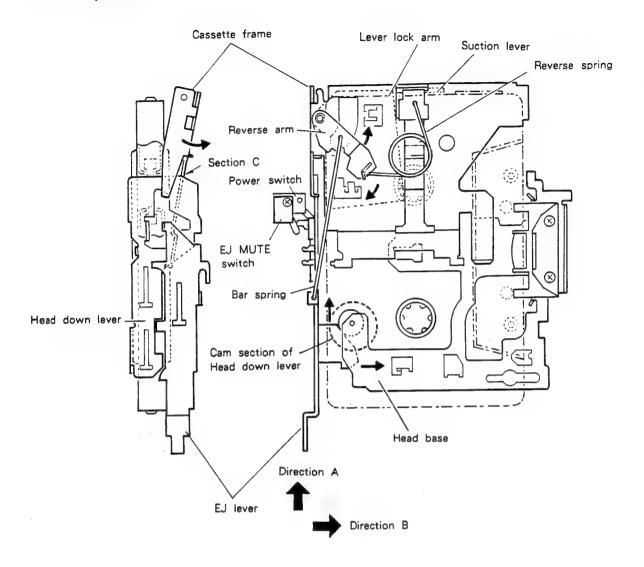

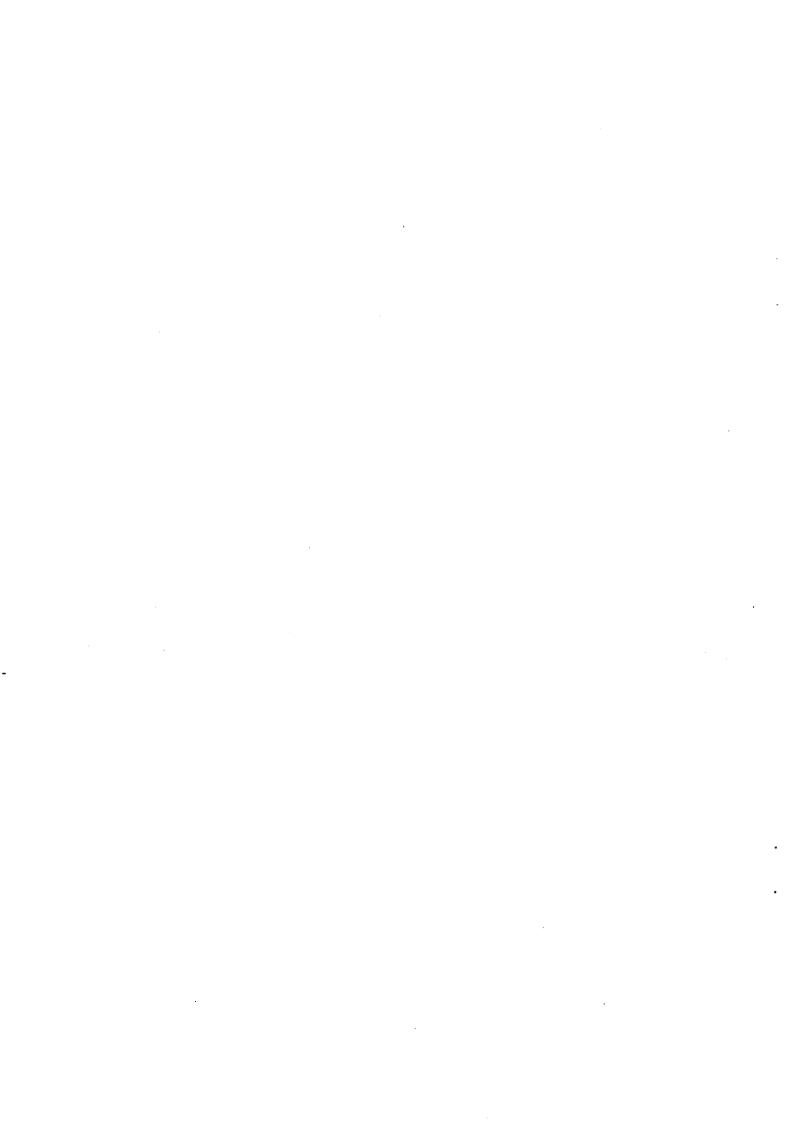

Fig. 20

- Push the EJ lever in Direction A by hand (EJ MUTE SW ON) At the same time, the head down lever slides in Direction A.
- The cam section of the head down lever returns the head base in Direction B (head base down operation).
- Section C of the cassette frame is pushed up by the stroke of the head down lever (push-up operation).
- The reverse arm is driven in a direction of arrow mark via bar spring by the EJ lever stroke.
- The reverse spring passes through the reverse position to eject the cassette tape (eject operation).
- With the EJ lever over-stroking, the lever lock arm can be rotated and locks the head down lever.
- When released, the EJ lever returns and is stopped by the head down lever.

# 2. ADJUSTMENT

# 2.1 CHECK POINTS OF CASSETTE MECHANISM

	■ Tape speed deviation:  3,000 <sup>+90</sup> <sub>-30</sub> Hz	■ Wow and flutter: Less than 0.2% (WRMS)
Confirm the following items when replacing parts of the cassette mechanism.	(4.76cm/s +3 %)  Using an NCT-111, measure the speed at the start and end of winding and take the maximum value. If values indicated by the pointer vary considerably, adjust to 70% of the minimun and maximum values. Measuring time shall be 5 - 6 seconds.	Using an NCT-111, measure the wow and flutter at the start and end of winding and take the maximum value. If values indicated by the pointer vary considerably, adjust to 70% of the minimum and maximum values. Measuring time shall be 5 — 6 seconds.
Fast forward and rewinding time:	■ Winding torque:	■ F.F. torque:
100 — 120 seconds	35 — 65g • cm	70 — 120g · cm
Using a C-60, set to fast forward and rewind, and measure the time with a stop watch.	Using a cassette type torque meter (100 g*cm), measure the minimum value while in the play mode. Measuring time shall be 2.5 — 6 seconds.	Using a cassette type torque meter (120 g*cm), measure the value when the tape stops in the F.F. mode.
■ REW torque:	Back tension torque:	Cassette loading force:
70 — 120g · cm	2-6g·cm	Less than 0.7 kg
Using a cassette type torque meter (120 g·cm), measure the value when the tape stops in the REW mode.	After setting in the REW mode without loading a cassette tape for 5 minutes, measure the back tension torque in the play mode, using a cassette type torque meter.	Push the center of the cassette and measure the force with a tension mete (3 kg).
,		

## 2.2 AZIMUTH ADJUSTMENT

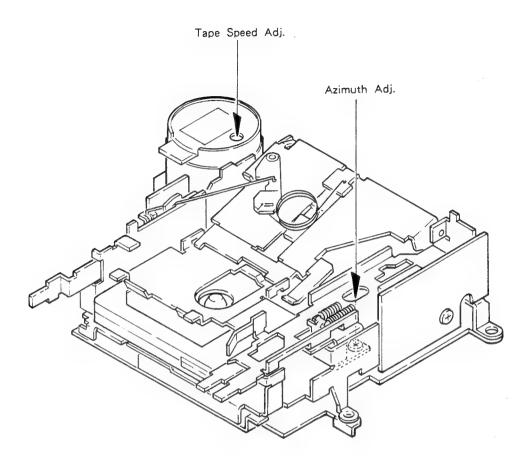

Fig. 8

## ● To Adjust (EXK1750)

- Play "A" side of NCT-110 (10kHz, 10dB). Adjust the screw for maximum output in forward and reverse directions.
- 2. Play "B" side in forward and reverse directions to confirm adjustment.

## 2.3 TAPE SPEED ADJUSTMENT

 Reproduce NCT-111 (3kHz, - 10dB). Adjust the semifixed resistor so that frequency counter shows 3010Hz (+80Hz, - 40Hz).

# 3. MECHANISM DESCRIPTION

## Loading operation

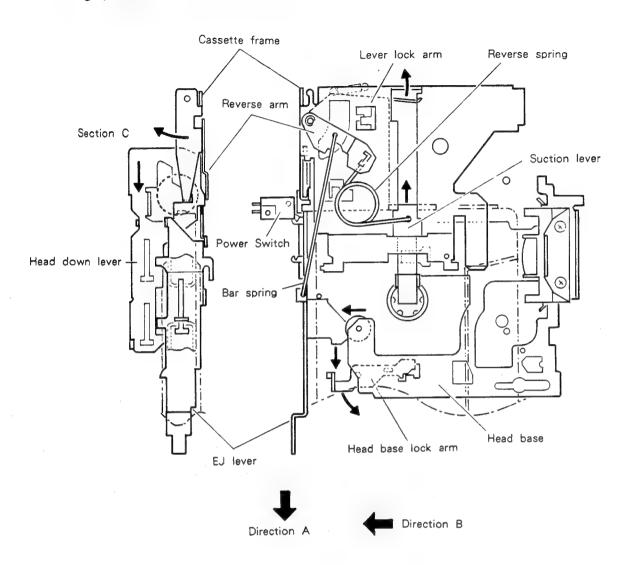

Fig. 9

- 1. A cassette tape, when inserted, pushes a suction
  - The reverse spring rotates to move past the reverse point. Then, the cassette is drawn by a force of a reverse spring (suction operation).
- After suction, the lever lock arm is pressed to be unlocked.
- The head down lever is unlocked and the lever moves in Direction A.

- 4. While moving, the EJ lever turns ON the power switch.
- The cassette frame engaged to the section C of the head down lever turns. (Cassette drop operation)
- At the stroke end, the head down lever turns the head base lock arm.
- A Stopper of the head base lock arm is released, and the head base moves forward (Direction B).

## MS Operation

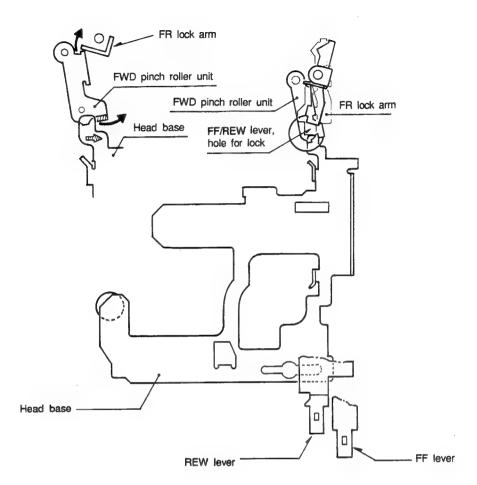

Fig. 10

The head base is moved back by switching the key-off solenoid off from the REW or FF condition, and is lowered (rotated) FWD pinch roller unit. The FWD pinch roller unit presses the bending part of FR lock arm to make it rotate in the direction that releases the lock. The lock of the FF/REW lever is consequently released.

Subsequently, the head comes out from the ATSC to enable PLAY condition.

## • Direction Changeover Operation

## (1) FWD play operation

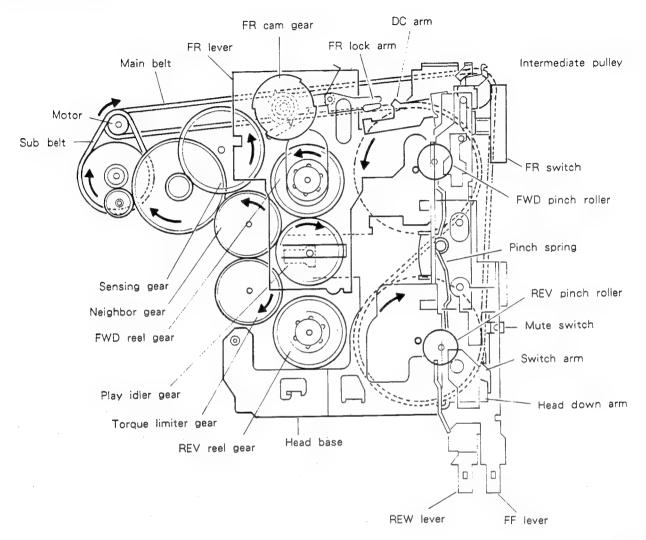

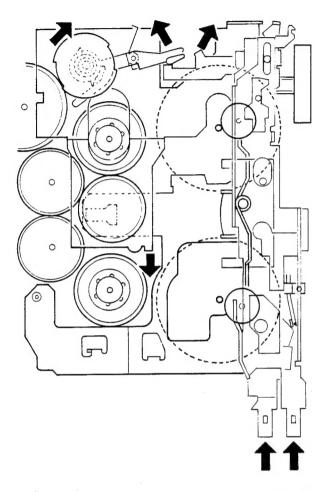

Fig. 11

When the FR lever is in the top position, the pinch spring is in the upper position to press the FWD pinch roller. The FR switch also moves upward and its reaction causes downward force on the FR lever. The spring attached to the FR lever applies upward force to the play idler gear from above to engage it with the neighbor gear and FWD reel.gear.

The tape is driven in the FWD direction by a running motor and taken up by the REV reel gear via the torque limiter gear.

### (2) Direction change operation

## (3) REV play operation

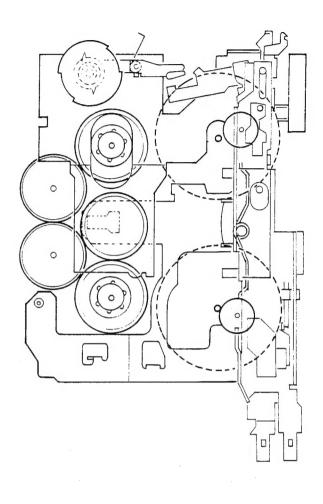

Fig. 12

Fig. 13

The direction is changed by pressing FF and REW levers simultaneously. The DC arm turns along a cam groove of FF and REW levers to turn the FR lock arm. As the FR lever applies force from above downward, the FR cam gear turns and the notch meshes with the sensing gear.

As a result, the FR lever moves downward.

When FF and REW levers are kept pressed, the lock arm contacts the outside of the FR cam gear to prevent changeover between FWD and REV. Pressing FF and REW levers also cause the mute switch to be turned ON. In other words, muting is valid while FF and REW levers are pressed. (Fig.12)

Moving the NR lever up and down causes changeover among the pinch roller, FR switch, and play idler gear. With FF and REW levers having been returned, the FR lock arm returns to the normal lock position and locks the gear when the FR gear completes an one-half turn. The mute arm also returns to turn OFF the mute switch. The reverse play state is thus obtained. (The same applies to changeover from REV to FWD.)

## • FF/REW Operation

## (1) FWD play operation

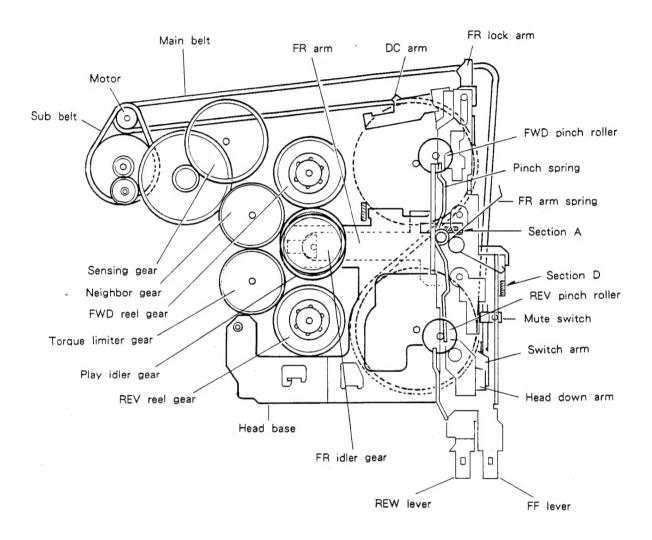

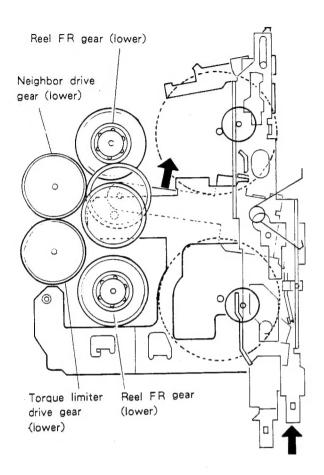

Fig. 14

In the FWD (REV) play state, the head base is fixed by a chassis stopper. The pinch spring presses the pinch roller into contact with a capstan to drive forward the tape. The REV reel gear takes up the tape via the torque limiter gear. In this case, the FR idler gear on the FR arm is centered by Section A of the head base and thus not rotating.

#### (2) FF Operation

#### (3) REW operation

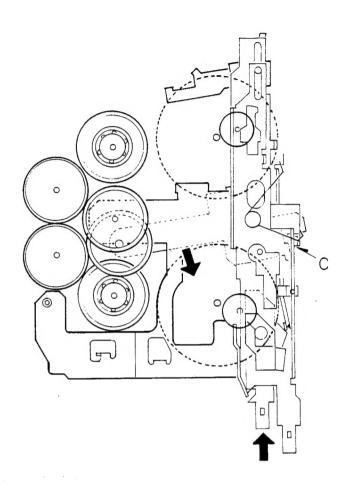

Fig. 15

Fig. 16

FF operation is obtained by pressing and locking the FF lever. As the FF lever is pressed, the switch arm turns to turn ON the mute switch. The head base is moved backward along the FF lever cam groove.

As the head base moves backward to release the pinch roller from the capstan, the play idler gear is simultaneously disengaged from the reel gear. As the head base moves backward, the FR arm centered by Section A is put into rotation by the FR arm spring to engage with the FWD side FR gear.

The FF lever is locked by the FR lock arm and performs the FF operation. (Fig.15)

Similar to the case of FF operation, pressing the REW lever causes the mute switch to be turned ON.

Simultaneously with release of the pinch roller from the capstan, the play idler gear is disengaged from the reel gear.

Section D of the REW lever presses a movable side of the FR arm spring, thereby engaging the FR gear to the FR gear on the REV side.

The REW lever is locked by the lock arm, performing the REW operation. This operation is cancelled when Section C is turned by the lever return spring. (Fig.16)

## Sensing Operation

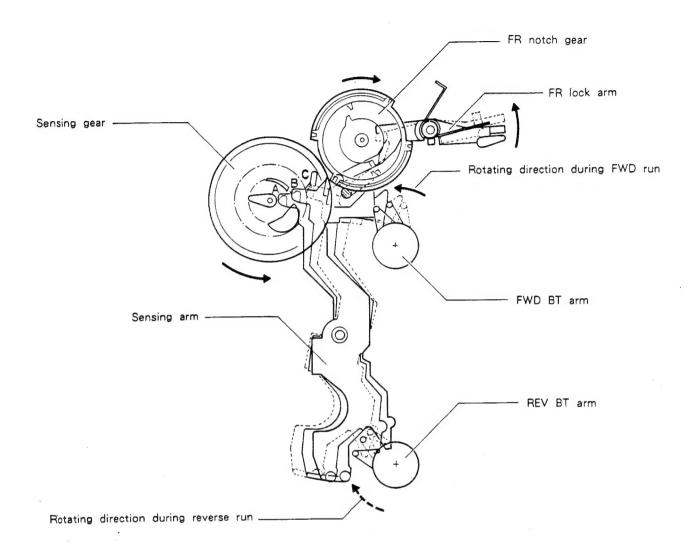

Fig. 17

- During tape run: The sensing arm keeps oscillation between A and B under a force of the FWD BT arm (or REV BT arm).
- 2. At end of tape: The force of the BT arm is lost. The sensing arm stops at Position B, then pushed out to Position C by a crescent cam of the sensing gear.
- 3. Change of run direction:

The FR lock arm turns counterclockwise along with movement of the sensing arm. The FR notch gear is unlocked and begins to turn.
